Introducing Nature to your Pool

**The Biotop headquarters
has been located in Weidling,
Klosterneuburg, Austria
since its foundation in 1985.**

Four decades have passed since, Biotop company founder DI Peter Petrich introduced a new era of leisure and swimming pleasure to Austria. Together with a well-coordinated team and our partner companies, we have since been able to build over 9,000 projects in Austria, all over Europe and now around the globe. We are therefore the world market leader in this field. Each Living Pool is unique and harmoniously embedded in its environment.

Our know-how grows with every new installation. It forms the basis for our range of products, which we can justifiably call unrivalled—a claim we want to fulfill also into the future. The professional planning, execution and continuing customer support, the use of exclusive components, plus our experienced team of specialists guarantee the reliable operation of the system and long-lasting enjoyment of your private bathing paradise. For owners of conventional swimming pools, we have developed the Converter System. This allows for an economically justifiable conversion to a chemical-free Living Pool.

In the following pages we would like to invite you on an inspiring voyage of discovery.

Your Biotop Team

Our Philosophy

To dive into pure, clear water completely free of chemicals, clear as a mountain lake. On hot days especially, many people try to find some relief from the sun's heat—even better, if they can find it in their own garden. But how do you create such a haven with perfectly balanced water?

It was Leonardo da Vinci who described water as the “blood of the Earth”. It is our most valuable good, and we need to treat it with care. As world market leader in the sector of Living Pool construction, our concern is to preserve this vital resource. For 40 years, we have been striving to bring clear, living water—like fresh from an alpine lake—into our clients' gardens. Always at the cutting edge of technology, we provide long-lasting, crystal-clear swimming pleasure entirely without chemicals. We believe water should

be alive, not deadened by toxic additives. Living water regenerates itself thanks to Biotop's technology and has positive effects on the mind, body and soul.

With a Living Pool, you can create your own garden paradise and a place for everyday natural swimming enjoyment. Individual adaptation to the existing architecture and detailed planning will integrate your Living Pool perfectly into your garden and create an oasis of well-being.

Biotop's newest development is the Zero Energy Pool, which meets its entire energy requirements through the power of the sun using photovoltaics. Measured over the entire year, the pool's energy balance is neutral, meaning no additional electric power is required to operate the pool.

This pool impresses with its crystal-clear water quality. Natural stone slabs and wood were used for the terrace.

Crystal-clear water that invites you to dive in - the Living Pool is the centrepiece of this modern retreat.

Activity in the chlorine-free water is clearly a joy and makes you forget the stress of everyday life.

The Living Pool

The Living Pool is an organic version of the traditional swimming pool. It looks like a conventional pool but requires no chlorine or other harmful chemicals to provide the ideal swimming enjoyment in pure, crystal-clear water.

Instead of the regeneration zone with plants and wild-life required for a Swimming Pond, a subterranean Biotop bio filter and the specially developed PhosTec Upstream phosphate filter provide natural biological treatment of the water in a Living Pool, maintaining its clarity and vitality.

An idyllic paradise: The chlorine-free Living Pool, surrounded by breathtaking nature - for pure relaxation and natural beauty in your own garden.

ADVANTAGES

- » Crystal-clear water, without chemicals
- » 100 percent biological
- » No regeneration zone or plants
- » Unlimited design variety and equipment options
- » Low maintenance
- » Conversion from conventional pool possible
- » Decades of proven technology and simple handling
- » Low energy and water consumption
- » Resource-saving, as no emptying in winter is necessary

Pure relaxation in your own garden: the chlorine-free Living Pool surrounded by a stylish wooden terrace and lush greenery - the perfect place for relaxing hours. Blue grey liner

Tradition meets modernity. This Living Pool with its unmistakable shape is the ideal complement to the design of the house.
Black liner

Design Possibilities

All of your Living Pool's design elements can be individually tailored to your needs. The spectrum ranges from contemporary minimalistic designs without plants to designs featuring stylish planting zones next to the pool, emphasising its natural character. Further attractive options include specially designed basins for water lilies or fish.

Living Pool without plants

The purest form of the Living Pool. It looks just like a conventional swimming pool but features our exclusively natural water treatment.

Living Pool with plants in a separate area

If you wish, a separate pool containing plants, e.g. water lilies, can be built right next to the swimming area. This plant pool is completely independent from the swimming pool and forms a separate unit.

This indoor pool not only boasts crystal-clear water, but is also hygienically safe and odourless. The perfect extension for the living area.

Individual Planning

What could possibly emphasise your garden's unique character more than a personalised Living Pool?

No matter what shape or form, the Biotop Living Pool leaves nothing to be desired.

When we plan your Living Pool we keep the overall concept of your garden in mind to ensure your new pool blends seamlessly into its environment. As global market leader, with over 9,000 pools and ponds built around the world so far, Biotop stands for unrivalled quality and almost limitless possibilities. The only boundary is in fact your own imagination—so what are you waiting for?

THE PHASES LEADING UP TO A FINISHED LIVING POOL

- 1.
- 2.
- 3.

Consultation and Planning phase

Together—and ideally on-site in your garden—we work with you to formulate your wishes as precisely as possible based on your needs and ideas to ensure that your Living Pool meets your expectations and provides long-lasting swimming enjoyment.

The following factors play an essential role in this process:

- » Understanding how you use your garden
- » The layout and circumstances on site
- » Your personal style preferences
- » The garden's character
- » The budget available

We take great care and all the time needed when collecting the necessary information for an initial design and quote. You can then study these documents at your leisure before suggesting any amendments and discussing the estimate in more detail during follow-up meetings with our pool planners.

Construction phase

Following a detailed schedule, our pool experts will begin the excavation work and start the construction of your Living Pool. Once all work is completed, the pool is filled with water and the technical components are put into operation. To make sure you will be able to swim in your new Living Pool as soon as possible, the original state of the surrounding area is restored or it is landscaped according to the plan.

Swimming phase

After a comprehensive instruction by your Living Pool expert, you will receive a handbook containing all the information needed to operate and maintain your pool. You can already swim in your Living Pool during the start-up phase, which lasts a few weeks. During this time the bio filter system slowly reaches its peak efficiency. Your Biotop expert will of course still be available to answer any questions arising during the lifetime of your pool.

A Living Pool with separate aquatic plant pool on historic grounds.

Technology

At Biotop, we strive to make our technology as simple as possible and easy to understand for the user.

1 The purpose of the **Curved Sieve Skimmer** is to remove floating particles from the Living Pool. The water flows over a curved screen with a mesh width of only 0.3 millimetres that removes even the smallest particles. A sophisticated mechanism controls the water flow via a flexible flap so that the correct amount of water always flows over the screen. Biotop was granted a European patent for this innovation.

Advantages

- » Even the finest particles are eliminated from the system
- » The screen is self-cleaning
- » Nutrients are removed from the water

2 Water flows through the **Bio Compact Filter** from top to bottom and is biologically cleaned along the way. Furthermore, impurities are held back by the filter. The result is crystal-clear water. In order to optimise the cleaning performance, water flows through the bio filter permanently. The biologically cleaned water then flows to the PhosTec Upstream filter.

Advantages

- » Biological cleaning with no need for chemicals
- » Functions with low energy requirements
- » The bio compact filter is comparatively small in size and is installed under the deck, invisible to the user
- » Takes up less space than common filter systems

3 The **PhosTec Upstream phosphate filter** efficiently binds the phosphorus dissolved in the water without the use of chemicals. Phosphorus promotes the growth of algae. By binding it, the algae are literally “starved”. The pool water flows through the filter from bottom to top to minimize the risk of clogging the filter. Nutrient-poor water is then pumped back into the pool by a small pump. Biotop was granted a European patent for combining the bio filter with the PhosTec Upstream filter.

Advantages

- » Phosphorus is reliably removed from the water
- » The filter’s compact size saves space
- » Easy handling
- » Simple replacement of the filter material
- » Long lifespan

4 For the water circulation in a Living Pool Biotop has developed a special system. The pump is fitted in the so called **Submersible Pump Chamber** where it is completely submersed in water, allowing water to flow to it simply by the force of gravity instead of being “sucked in” by the pump. Mounted at the bottom of the chamber, the pump conveys the water back into the pool through pressure pipes.

Advantages

- » Submersed pumps are quiet, creating almost no noise
- » The low noise level means the chamber can be installed underneath the wooden deck
- » The pump does not need to be uninstalled for winter
- » The pipes do not need to be emptied for winter
- » Incoming and outgoing pipes can be regulated individually

Two water circuits: Easy to operate

The separation into two water circuits allows the pumps to operate economically and with minimal use of space. The first circuit is responsible for cleaning the surface of the water and removing floating particles. Its pump runs throughout the day.

The purpose of the second circuit is to eliminate organic compounds. Its pump runs continually during the swimming season. Features like rock fountains, waterfalls or curtain fountains can be integrated into either or both of the circuits.

↑
Schematic cross section

5 The **pool robot** cleans the walls and bottom of the pool automatically.

6 A **Carbonator** or a Carbonatorbox feed natural CO₂ into the swimming water. As a result the biofilm in the Living Pool is supplied with carbon, and the pH value is regulated. This unique process was developed by Biotop and is patented.

💡 The components 2, 3 and 4 can be installed in a single unit, the **Combi-Box**, to save space.

BASIN CHOICES OF LIVING POOLS

The choice of pool basin surfaces for natural pools is diverse. Natural pools focus on a modern, clean-lined design, with aesthetic and ecological aspects playing an important role. Common materials include foil, polypropylene, exposed concrete, granite and stainless steel. Each material offers unique advantages and can vary depending on budget and construction time.

Liner waterproofing

The liner surface is the most commonly used method for living pools. A concrete pool is constructed on site and waterproofing is carried out using a tear-resistant, UV-resistant FPO (flexible polyolefin) liner or PVC liner. Pool liners ranging from bluish grey tones to dark, almost black anthracite tones are particularly popular. The timeless classics, blue-grey, graphite grey, granite grey and anthracite give every pool an elegant touch.

Kusserpool made of granite

Granite prefabricated pools from Kusser impress with their material and construction, which make both in-ground and freestanding pools possible. The high quality construction ensures aesthetic surfaces without joints and allows the pool to be customised. All components are made from local granite, which not only makes the pool visually appealing, but also increases its durability and robustness. After a short construction period, the pool is delivered directly to your garden.

Architectural concrete

Exposed concrete pools offer a raw, natural aesthetic and blend harmoniously into modern architecture. The individual colouring of the concrete creates a unique atmosphere that makes the pool a special eye-catcher in your garden. Fair-faced concrete is characterised by its high compressive strength and robustness, which makes it a durable choice for a natural pool.

INDIVIDUAL CUSTOMISATIONS FOR LIVING POOLS

Our wide range of surface options can be customised. The designs are also flexible: choose between overflow, skimmer or infinity for the ideal swimming experience.

Customised equipment such as covers or steps are possible for all versions.

Tiles

Tiled pools combine timeless elegance with modern design. Whether classic or modern, discreet or eye-catching - tiles can be used to create permanently heated swimming pools that exceed all expectations.

Stainless steel

Stainless steel pools are a perfect combination of clean, modern aesthetics and classic design. They are characterised by their robustness and high precision, making them a popular choice for modern natural pools.

Prefabricated monopools

The Living Pool can also be supplied as a prefabricated pool, which is delivered as a whole. This construction method has numerous advantages that make it an extremely attractive option. The short construction time, the perfect surfaces and the long service life of the pool are particularly noteworthy. Another advantage is the ease of cleaning. The smooth surfaces of the prefabricated pool make it easier to remove deposits and ensure that the water remains permanently clear and clean.

The prefabricated pool is made from robust polypropylene sheets, a material characterised by high stability, durability and resistance. Production takes place directly at the manufacturer's premises, where

re the pools are manufactured precisely to the dimensions required by the customer.

Overall, the prefabricated pool is a modern, practical and durable solution that is ideal for the construction of natural pools and fulfils the highest demands.

↑ **The prefabricated pool is placed in one piece on the finished concrete floor slab using a crane.**

» MONOPOOL—DETAILS

Overflow

Infinity

Skimmer

Monopools can basically be divided into the three types overflow, infinity and skimmer. This makes them ideal for all different terrains and design requirements.

Staircases can be integrated into the pool directly during manufacture, or stainless steel ladders can be fitted later on. On top of the standard configuration, a multitude of accessories and fittings such as lights, massage jets and counter-current systems are available.

Pool covers are used to protect against dirt and to improve heat storage. They reduce evaporation on hot days and thus help to save water. The covers can be supplied either as a standard form, with a chute, or installed within a bench seat.

The trending colours for the new generation of pools are various shades of grey. They are particularly suited for organic pools. Due to its natural look and excellent cleaning properties, Biotop recommends the colours blue-grey or anthracite.

with flat section

with rucksack chute

with bench seat

Blue-grey

Anthracite

Customised features, such as corner staircase and overflow, create a flowing transition to the living area.

ADVANTAGES

- » Any size is possible
- » Polypropylene, an environmentally friendly material, does not release any toxins
- » High quality finishing on all corners and edges
- » Simple, quick installation with short on-site construction time
- » Smooth surfaces simplify cleaning
- » 10-year warranty

The infinity edge extends the view into the distance. Via a staircase with a flat area, you glide into the water without a care in the world.

Conversion & Refurbishment

The Living Pool converter-system makes it possible to convert an existing pool from conventional to organic operation very easily.

Before ↑
After →

Turning a conventional pool into a Living Pool

When converting a chlorine pool into a Living Pool, the existing water circuit consisting of skimmer, pump and sand filter can usually still be used. Only the chlorination is discontinued. Instead a converter chamber containing the biological filter, the PhosTec Upstream filter and a pump is installed.

This chamber measuring about 2x1x1 metres is installed right next to the existing pool and connected to it by a feed and a return pipe. The pump for the bio filter circuit only requires very little electrical power, which is also why the pool's operating costs can be reduced significantly through such a conversion.

↑
The pre-existing water circuit consisting of skimmer, pump and sand filter remains, only the chlorination is shut down.

↑
In addition, a biocirculation system is installed, the converter chamber.

Care & Maintenance

In order to ensure optimal water quality, your Living Pool requires appropriate maintenance. We are happy to advise you or carry out the maintenance for you.

Pool robot

Cleaning brush

Biofilm

The walls and bottom of the Living Pool can be cleaned automatically by a pool robot, which should be operated daily during the swimming season to effectively prevent a biofilm* from appearing. Any spots that the robot cannot reach need to be brushed with hand-held tools from time to time.

However, despite the regular use of a cleaning robot, some residue may still accumulate during the swimming season. In rare cases, usually in combination with insufficient care or heavy limescale deposition, the biofilm* may be dark-coloured and persistent. In such cases, we recommend removal using special high-pressure cleaners. Only certified devices should be used in order to protect your Living Pool's liner.

Filling water of suitable quality is the best guarantee for clean water in a Living Pool. Your local water should therefore be tested accordingly prior to being used for filling. Murky water, limescale deposition and algae growth can occur for a multitude of reasons and be eliminated effectively with appropriate measures. A professional cause analysis by your specialist is essential to determine which steps should be taken next.

SEASONAL MAINTENANCE & CARE

- » The skimmer strainer should be emptied weekly.
- » The filter mats in the bio compact filter should be removed from the chamber and rinsed once or twice per year.
- » The PhosTec Upstream filter should be rinsed thoroughly as required, at least once per year.
- » Preparing the system for winter requires only a few simple steps. Further information on this topic can be found in our service videos, which you can watch on our website any time.

The **Biofilm** is a symbiotic community of bacteria, algae or fungi that adhere to surfaces and grow there.

FAQs

While publicly used pools are subject to strict legal threshold values regarding their hygienic water quality, these regulations do not apply to privately used pools. You can, however, be sure that your Living Pool meets the same water quality standards. Scientific tests performed by Biotop have also shown that our pools' water quality is excellent.

IS THE BIOTOP LIVING POOL HYGIENICALLY SAFE?

A Biotop Living Pool uses no chemicals that pollute the environment. Its energy and water usage are very low too, since a Living Pool is only filled with water once. In contrast, a conventional pool, needs to be emptied in autumn and refilled in spring, releasing thousands of litres of chlorinated water into the environment.

WHY IS A LIVING POOL BETTER FOR THE ENVIRONMENT?

Ideally, you should have a level (or gradable) area of at least 40 to 50 m². Whether it is in the sun or shaded does not matter. Each pool is planned and adapted according to the circumstances given on site.

WHICH REQUIREMENTS NEED TO BE FULFILLED IN ORDER TO BUILD A LIVING POOL?

Since the water is not disinfected, a biofilm can naturally appear on the pool's walls. It must be removed daily by a pool robot. Any spots that the robot cannot reach need to be brushed with hand-held tools from time to time. The skimmer strainer should be emptied regularly. The bio filter must be cleaned once a year. The exchange of the PhosTec filter material is only necessary every few years. The pool is made fit for spring or winter by following only a few simple steps. Those don't take much time and can also be done for you by our service team.

HOW MUCH CARE & MAINTENANCE IS REQUIRED?

No, contrary to popular belief, saltwater pools are not organic. The only difference to standard chlorine pools is that the chlorine is not poured into the water, but is produced by electrolysis from common salt dissolved in the pool. The effect is the same—it is still a chlorine pool.

CAN A LIVING POOL BE HEATED?

Yes, a Living Pool can be heated to a comfortable swimming temperature, e.g. by means of a solar heating system. A heat pump or heat exchanger can also be used. In addition, a pool cover helps to prevent temperature loss.

IS A SALT-WATER POOL ORGANIC?

What our Customers say

Because we feel very close to nature, we wanted a pool without chemically treated water whilst maintaining the traditional character of a swimming pool. That's why we decided on a Living Pool, and we feel it enriches our life every day!

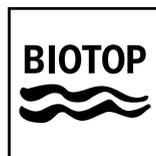

Our Living Pool has turned our garden into an oasis in the middle of the city—and into our family's outdoor living room for the summer.

In my dreams, my house was always located near the water. With the Living Pool, I was now able to make that dream come true.
